Controls and compliance checklist

To complete the controls assessment checklist, refer to the information provided in the scope, goals, and risk assessment report. For more details about each control, including the type and purpose, refer to the control categories document.

Then, select "yes" or "no" to answer the question: Does Botium Toys currently have this control in place?

Controls assessment checklist

Yes	No	Control
	M	Least Privilege
	A	Disaster recovery plans
A		Password policies
		Separation of duties
M		Firewall
	M	Intrusion detection system (IDS)
	M	Backups
A		Antivirus software
V		Manual monitoring, maintenance, and intervention for legacy systems
		Encryption
		Password management system
Y		Locks (offices, storefront, warehouse)
		Closed-circuit television (CCTV) surveillance

	Fire detection/prevention (fire alarm, sprinkler system, etc.)

To complete the compliance checklist, refer to the information provided in the <u>scope</u>, <u>goals</u>, <u>and risk assessment report</u>. For more details about each compliance regulation, review the <u>controls</u>, <u>frameworks</u>, <u>and compliance</u> reading.

Then, select "yes" or "no" to answer the question: Does Botium Toys currently adhere to this compliance best practice?

Compliance checklist

Payment Card Industry Data Security Standard (PCI DSS)

Yes	No	Best practice
	Y	Only authorized users have access to customers' credit card information.
Y		Credit card information is stored, accepted, processed, and transmitted internally, in a secure environment.
	Y	Implement data encryption procedures to better secure credit card transaction touchpoints and data.
	Y	Adopt secure password management policies.

General Data Protection Regulation (GDPR)

Yes	No	Best practice
	A	E.U. customers' data is kept private/secured.
Y		There is a plan in place to notify E.U. customers within 72 hours if their data is compromised/there is a breach.
	A	Ensure data is properly classified and inventoried.

M

Enforce privacy policies, procedures, and processes to properly document and maintain data.

System and Organizations Controls (SOC type 1, SOC type 2)

Yes	No	Best practice
	M	User access policies are established.
	V	Sensitive data (PII/SPII) is confidential/private.
	V	Data integrity ensures the data is consistent, complete, accurate, and has been validated.
	M	Data is available to individuals authorized to access it.

This section is *optional* and can be used to provide a summary of recommendations to the IT manager regarding which controls and/or compliance best practices Botium Toys needs to implement, based on the risk posed if not implemented in a timely manner.

Recommendations (optional): In this section, provide recommendations, related to controls and/or compliance needs, that your IT manager could communicate to stakeholders to reduce risks to assets and improve Botium Toys' security posture.

Because of the risks associated with giving all employees access to internally stored data as well as cardholder data and PII/SPII, such as unauthorized access to information by insider threats for example, access to this information must be limited to authorized users. Also, this organization needs to have an intrusion detection system in place to know when a security breach occurs. Access controls pertaining to

least privilege and separation of duties must also be incorporated so that employees have limited access to specific types of information. Encryption needs to be used to ensure the confidentiality of customer information by making it hard for the threat actor to decipher the information in the secure ciphertext format. Disaster recovery plans and backups of critical data are needed to establish business continuity to keep productivity going even in the event of a data breach. The password policy must be in agreement with the current minimum password complexity requirements(A minimum of 8 characters, a combination of letters, and at least one number and/or special character). There also needs to be a centralized password management system to enforce those requirements. There needs to be a specific schedule for people to monitor and manage legacy systems manually. Also, the security team needs a clear idea of how the intervention methods shall be carried out so that the team would know what to do when it comes to carrying out that process.
